Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	8 March 2026
Team ID	
Project Name	Cab Booking
Maximum Marks	4 Marks

Functional Requirements (from *Solution Requirements.docx*)

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Authentication	- User registration with email/password - User login - Admin login - JWT token based authentication
FR-2	Cab Management (User)	- View list of available cabs - View cab details (image, driver, price) - Filter cabs (optional)
FR-3	Booking	- Select pickup/drop locations - Enter dates and times - Calculate fare based on distance and cab price - Confirm booking - View booking history - Cancel booking
FR-4	Admin: Cab Management	- Add new cab with image - View all cabs - Edit cab details - Delete cab
FR-5	Admin: User Management	- View all users - View user details - Edit user (name, email) - Delete user
FR-6	Admin: Booking Overview	- View all bookings with user and cab info - (Optional) filter by date/user

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive UI with consistent design, mobile responsive, clear error messages.
NFR-2	Security	Passwords hashed using bcrypt, JWT tokens for session, protected routes, no exposure of sensitive data.
NFR-3	Reliability	Backend API responds with appropriate status codes, data validation on both client and server.
NFR-4	Performance	Page load under 3 seconds, API responses < 500ms for typical requests.
NFR-5	Availability	Application should be accessible 24/7 with minimal downtime (deployed on cloud).
NFR-6	Scalability	MongoDB can handle growing data; stateless JWT allows horizontal scaling.
